NARRATOR: The Chevron Shipping Company Centre of Learning and Development is a new start of the art training facility based in Glasgow in the United Kingdom.

The Centre features training rooms with advanced audio/visual systems, and the latest hands-on simulators. There's a fresh, relaxing environment to promoting professional skills in a learner-friendly setting. The Centre boasts a full mission engine simulator with walk-through technology based on one of our ships. This allows realistic training, and assessment of our proficiency.

The six-stationed engine part task simulator room provides intense part task training combining a disciplined approach to technical, and non-technical skills alike. The bridge part task simulators are designed to enhance, and test the specific nautical skills in the ever-more technologically complex world of modern shipping.

The two full mission bridge simulators with attached bridge wings give our students the chance to practice both regular, and abnormal operations, communication, and command.

The range of competence required to manage modern vessels can be developed, and verified without the hazards or risks. Chevron Shipping's own professional instructors can coach, and evaluate, give feedback, and oversee training, introducing real-time problems. Stretching trainees so they know they are ready to meet our operational challenges.

Welcome to Chevron Shipping Centre of Learning and Development.
